SV2016

201214262 라가영, 201313250 서지혁

Software Verification

- Dependable Software Laboratory

- The only course covering software verification

- dslab.konkuk.ac.kr was most helpful

- Archived lectures and coursework provides a clear guideline and expectations for prospective and attending students

Teaching Assistant

- Eui-Sub Kim

- Near–ubiquitous in time and space

- Very kind and responsive to coursework submission and website update

- Thank you!

SMA2016

- Fresh approach linking lecture classes and teams

- Communication is paramount between teams

- Would have been better if matched earlier

- CTIP environment was not used as often as hoped

- Documentation could have been better

Analysis and Testing

- A good overview of testing methodologies

- Got to know many kinds of static analysis tools

- Immediately applicable to other classes & projects

- Found a lot of failure cases while testing

- Lost hope for conventional non-tested software

Overall

- Even as a non–CS team, class was fun to follow

- Engaging lectures and life advice

- Rational solutions to real world problems

- Now we know how to confidently build software

- The best CS course you can attend at Konkuk

Thank you!
